FULL STACK JAVA PROJECT GUIDE

Project: Portfolio Website(Frontend Focused)

Objective:
Create a responsive personal portfolio website to showcase projects, skills, and experiences.

Features:
- Home Page: A clean introduction section with a profile picture and a brief bio.
- About Section: Detailed information about skills, education, and background.
- Projects Showcase: Display personal projects with images, descriptions, and links.
- Social Links: Provide clickable links to LinkedIn, GitHub, and other platforms.
- Dark Mode Toggle (Bonus): Offer a light/dark mode switch for better user experience.
- Animations: Use simple animations for a modern touch.

Tech Stack:
-Use the HTML , CSS, JavaScript for creating your website.
-Optional:- For the backend you can implement it using java & spring “web-mvc-module”

Learning Outcomes:
- Building responsive UI using HTML, CSS flexbox & Mediaqueries.
- Handling interactivity with Javascript Event handling.
- Routing to manage multiple pages.
- Managing animations and styling in a modern web design.
- Deploying and optimizing a portfolio website for visibility.

Bonus:
- Add a blog section for writing technical articles.
- Implement form validation in the contact section.
- Enable customization options (e.g., changing themes or colors).

Project: Online Bookstore(Full Stack Focused)

Objective:
Create a simple online bookstore where users can browse books, add them to their cart, and complete a checkout.

Key Features:
-Homepage:
- Display a list of books (title, author, price).
- Search bar to find books by name.

- Book Details Page:
- Show book description and price.
- Add to Cart button to store books in a cart.

- Cart Page:
- List added books and total price.
- "Remove" button to delete items from the cart.

- Checkout Page:
- Simple order confirmation message after checkout.

- User Authentication (Optional):
- Simple login/signup system with basic validation.

Tech Stack::
- Frontend: HTML, CSS, JavaScript
- Backend: Java, Spring, Spring Web MVC
- Optional:- Database: JDBC
- API Endpoints:
  - `GET /books` → Fetch all books
  - `GET /books/:id` → Fetch book details
  - `POST /cart` → Add book to cart
  - `GET /cart` → Get user's cart
  - `DELETE /cart/:id` → Remove book from cart
  - `POST /checkout` → Place an order

Learning Outcomes:
- Understanding of HTML, CSS, JavaScript for UI design.
- Handling Web MVC & Java for backend logic.
- Simple database management using JDBC(optional).
- Understanding basic REST API concepts.
-Bonus (Optional Enhancements):- Add book reviews with comments.
- Display book images for better visuals.
